

Emacs Support for Janet

Description	Keystroke	Function	Note
Janet Programming Language Support  PEL provides experimental support for the Janet Programming language, a Lisp-like functional programming language that can easily be embedded.  This document is in early state. Since Janet uses Lisp syntax, all packages supporting Lisp languages can be used, specifically ⌘I - Lispy.  PEL activates Janet support when the pel-use-janet user-option is turned on (t) or when one of the following other user-options that activate specific packages:  The janet-mode external package  activated by pel-use-janet-mode. - PEL currently uses my fork of the janet-mode project that integrates a couple of fixes.  The ijanet-mode external package  activated by pel-use-ijanet.  The inf-janet external package  activated by pel-use-inf-janet. See also: ⌘ Customize To activate Janet support for the first time use <f11> <f2> pel-pkg-for-janet and turn pel-use-janet on. Later you can use the key bindings shown below. - PEL provides Lispy support for Janet when the janet-mode is added to the list specified by pel-modes-activating-lispy user-option. See ⌘I - Lispy Last updated on: 2025-10-29			
Open this PDF file. See also: ⌘ Help/Info	<f11> SPC T <f1> <f12> <f1>	(pel-help-pdf &optional OPEN-WEB-PAGE)	Open the ⌘I - Janet local PDF. If the prefix argument (like C-u or M--) is used, then it opens the remote GitHub hosted raw PDF instead. If the pel-flip-help-pdf-arg user-option is set it's the other way around.
⌘ Customize PEL Janet support	<f11> SPC T <f2> <f12> <f2>	(pel-customize-pel &optional OTHER-WINDOW)	Customize PEL Janet support: pel-use-janet, pel-use-janet-mode, pel-use-ijanet, pel-use-inf-janet If OTHER-WINDOW is non-nil (use C-u), display in another window.
⌘ Customize Emacs Janet support	<f11> SPC T <f3> <f12> <f3>	(pel-customize-library &optional OTHER-WINDOW)	Customize Emacs Janet support: janet, ijanet, inf-janet If OTHER-WINDOW is non-nil (use C-u), display in another window.
See also: ⌘ Menus ⌘ Speedbar	 PEL currently provides basic support which includes: - Support for the <f12> key prefix to the key bindings usually available to the Lisp-like programming languages. - Basic iMenu Support - Speedbar Support - PEL does not currently implement any specialization to the commands and key bindings for Janet. This will be provided later once more testing is done with the external packages listed above. - Please do not hesitate to contact me if you'd like something added, modified or find a bug.
