

Emacs support for Modula-2

Description	Keystroke	Function	Note
Modula-2 Editing Last updated on: 2025-03-30	Emacs has built-in Modula-2support. - PEL adds extra support when  the <code>pel-use-modula-2</code>user-option is set to t. Type <code><f1> o pel-use-modula-2 <RET></code> to change it. - PEL support is partial . If you need extra features implemented please request them via bug in the PEL Github project.		
Open this PDF file. See also: ℹ Help/Info	<f11> SPC 2 <f1> <f12> <f1>	(pel-help-pdf &optional OPEN-WEB-PAGE)	Open the ℹ - Modula-2 local PDF. If the prefix argument (like <code>C-u</code> or <code>M--</code>) is used, then it opens the remote GitHub hosted raw PDF instead. If the <code>pel-flip-help-pdf-arg</code> user-option is set it's the other way around.
ℹ Customize PEL Modula-2 support	<f11> SPC 2 <f2> <f12> <f2>	(pel-customize-pel &optional OTHER-WINDOW)	Customize PEL Modula-2 support. If OTHER-WINDOW is non-nil (use <code>C-u</code>), display in another window.
ℹ Customize Emacs Modula-2 support	<f11> SPC 2 <f3> <f12> <f3>	(pel-customize-library &optional OTHER-WINDOW)	Customize Emacs Modula-2 support: modula2 If OTHER-WINDOW is non-nil (use <code>C-u</code>), display in another window.
Comments			
Toggle display of comments in buffer or active region See also: ℹ Comments	<f11> ; ;	(hide/show-comments-toggle &optional START END)	Toggle hiding/showing of comments in the active region or whole buffer. If the region is active then toggle in the region. Otherwise, in the whole buffer.  This requires the hide-comnt.el package (see ℹ Comments).  PEL activates it when the <code>pel-use-hide-comnt</code> user option is t.
